Training and Doctrine Development Management System (TD2)
Training and Doctrine Development Management System (TD2) is the interface system that allows users (Doctrine and Training Staffs) to identify training and doctrine development products (requirements), establish corresponding workload effort (man-hours/years), develop a work plan (i.e. the Doctrine Literature Master Plan), and assign personnel assets to specified work. The system calculates the work effort in accordance with established, certified labor rates (estimate time values) per type of product over each year of the year of execution, budget, and POM cycle. TD2 generates the workload requirements for HQDA, G3 and the corresponding input files for costing in the Institutional Training Resource Model (ITRM). Provides the doctrine user the capability to program and forecast workload requirements for the year of execution (current FY), budget and POM years that will be displayed and incorporated in the Doctrine Literature Master Plan (DLMP).

Training and Doctrine Development Management System

WHAT IS TD2?

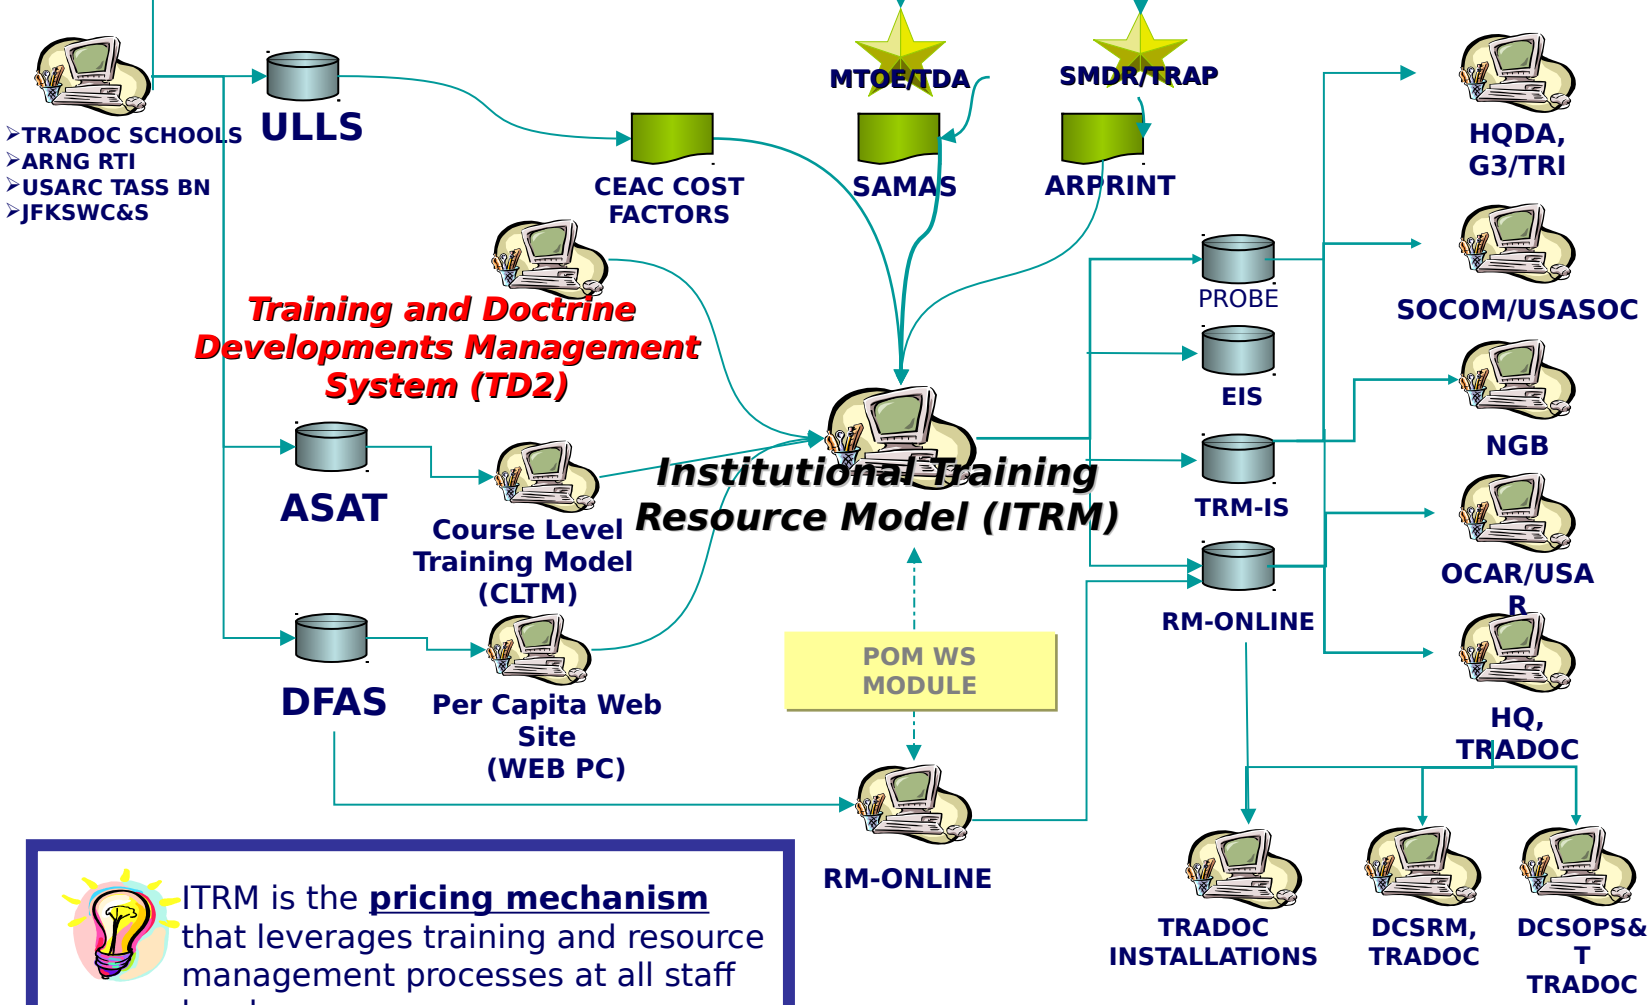
HQDA, G3 Sponsored Model

Training and Doctrine Development Management System (TD2) is the interface system that allows users (doctrine, QA and training staffs) to identify training and doctrine development products (requirements), establish corresponding workload effort (man-hours/years), develop a work plan (i.e. the Doctrine Literature Master Plan), and assign personnel assets to specified work.

TD2 is the interface model to ITRM

HTTPS://TRADOCAPPS.MONROE.ARMY.MIL/TD2

ITRM is a Network of Models



ITRM is the **pricing mechanism** that leverages training and resource management processes at all staff levels.

What Does It Do?

- Calculates the work effort in accordance with established, certified labor rates (estimate time values) per type of product over each year of the year of execution, budget, and POM cycle.

- Generates the workload requirements for HQDA, G3 and the corresponding input files for costing in the Institutional Training Resource Model (ITRM).

- Provides the doctrine user the capability to program and forecast workload requirements for the year of execution (current FY), budget and POM years that will be displayed and incorporated in the Doctrine Literature Master Plan (DLMP).

Benefits of TD2:

- **Provides the major command and Department of Army the means to assign priority for important resource decisions.**

- **Allows schools to identify products they will revise, review, or create.**

- **Enables schools to program manpower against the real workload.**

- **Provides the schools the means to identify people to do the work planned.**

- **Generates the major command's "master plan" that is updated by the installations.**
